

Report

The experience on this project was really helpful. And what we learned and did on the lab and on the project was new to us. And we really studied this subject even deeper. We did new tasks that were not prior to this initial of this subject.

But there were some failures. On this project, we had moments that were not clear, and due to incorrectly composed questions, we were unable to do the last phases. Because at the beginning of the project we got together late and in the beginning we had to do the work on our own. And then it was too late.

In the implementation of the project, we decided to make a website. As we noted earlier, the main goal of our project is to create something useful for people. In particular, due to recent events (a pandemic that has lasted for over a year), we wanted to develop a website where people could easily find medicines without any problem. Due to a shortage of medicines in the city, residents began to line up without observing quarantine measures, which led to even greater problems.

The site is also very convenient and helps not to waste time and immediately find pharmacies that have the necessary medicines. this facilitates quick assistance to those in need and does not violate quarantine measures.

This is a service for the search for drugs and medical services in Kazakhstan. We do not sell drugs or offer services, but we help you quickly find a pharmacy or a place where they are, and at a comfortable price.
